DETAILED ACTION

Status of the Application

[1] Applicant's amendment to the claims, filed on 4/25/09, is acknowledged. This listing of the claims replaces all prior versions and listings of the claims.

Examiner's Amendment to the Abstract

[2] An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Michael A. Sanzo on 7/30/09.

[3] The abstract has been re-written as a single paragraph as follows:

---The invention relates to a process for the preparation of L-amino acids, in particular L-threonine, in which the following steps are carried out: a) fermentation of microorganisms of the Enterobacteriaceae family which produce the desired L-amino acid and in which the *yjgF* ORF or the nucleotide sequence which codes for it are attenuated, in particular eliminated, b) concentration of the L-amino acid in the medium or in the cells of the bacteria, and optionally c) isolation of the L-amino acid.---

Examiner's Amendment to the Claims

[4] An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Michael A. Sanzo on 7/28/09.

[5] The claims have been amended as follows:

- Cancel Claims 41, 52, 55, and 58-61.
- Re-write Claim 38 as follows:

A process for producing L-threonine comprising:

- a) culturing or fermenting an *Escherichia coli* cell in a medium for a time and under conditions suitable for producing said L-threonine;
- b) isolating said L-threonine; and
- c) determining the amount of L-threonine isolated,

wherein the expression of the *yjgF* open reading frame of said *E. coli* cell is eliminated by one or more methods of mutagenesis selected from the group consisting of: deletion of all or at least one nucleotide of the *yjgF* open reading frame; insertion of at least one nucleotide in the *yjgF* open reading frame; and transitional or transversional mutagenesis with incorporation of a non-sense mutation in the *yjgF* open reading frame, wherein said elimination of the expression of the *yjgF* open reading frame results in an increased production of L-threonine by said *E. coli* cell relative to the amount of L-threonine produced in said *E. coli* cell prior to said elimination of the expression of the *yjgF* open reading frame; and wherein prior to elimination of the expression of the *yjgF* open reading frame, said *yjgF* open reading frame comprises the nucleotide sequence of SEQ ID NO: 1 and encodes the polypeptide of SEQ ID NO:2.

Art Unit: 1656

- Re-write Claim 42 as follows:

The process of claim 38, wherein the expression of the *yjgF* open reading frame has been eliminated by the deletion of at least one nucleotide of the *yjgF* open reading frame.

- Re-write Claim 43 as follows:

The process of claim 38, wherein said L-threonine is isolated from said *E. coli*.

- Re-write Claim 45 as follows:

The process of claim 38, wherein culturing or fermenting is performed using a batch process.

- Re-write Claim 46 as follows:

The process of claim 38, wherein culturing or fermenting is performed using a fed batch process.

- Re-write Claim 47 as follows:

The process of claim 38, wherein culturing or fermenting is performed using a repeated fed batch process.

- Re-write Claim 48 as follows:

A process for producing L-threonine, comprising:

a) culturing or fermenting an *Escherichia coli* cell in a medium for a time and under conditions suitable for producing said L-threonine; and

b) recovering said L-threonine and determining the amount of said L-threonine recovered,

wherein the expression of the *yjgF* open reading frame of said *E. coli* has been eliminated by deletion of all of the *yjgF* open reading frame and wherein said *yjgF* open reading frame encodes the polypeptide of SEQ ID NO:2.

- Re-write Claim 56 as follows:

The process of claim 48, wherein constituents of the culture or fermentation broth and/or biomass in its entirety or portions thereof remain with the recovered L-threonine of step b).

- Re-write Claim 62 as follows:

The process of claim 48, wherein culturing or fermenting is performed using a batch process.

- Re-write Claim 63 as follows:

The process of claim 48, wherein culturing or fermenting is performed using a fed batch process.

- Re-write Claim 64 as follows:

The process of claim 48, wherein culturing or fermenting is performed using a repeated fed batch process.

Examiner's Reasons for Allowance

[6] The prior art teaches the nucleotide and amino acid sequences of *E. coli* YjgF. See Enos-Berlage et al. and Blattner et al., cited in the IDS filed on 11/18/04. The prior art also suggests deleting the *yjgF* gene in an *E. coli* cell for characterization of the function of YjgF. See Volz et al., cited in the IDS filed on 11/18/04. However, there is no teaching or suggestion in the prior art to use an *E. coli* with eliminated expression of *yjgF* in a method of L-threonine production, particularly including a step of determining the amount of L-threonine isolated or recovered. In fact, the prior art teaches that an inactivating mutation in *yjgF* in *Salmonella typhimurium* actually *compromises its ability*

to synthesize isoleucine. See Enos-Berlage et al., cited in the IDS filed on 11/18/04. As such, the methods of claims 38, 42-49, 56, and 62-64 are allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David J. Steadman whose telephone number is 571-272-0942. The examiner can normally be reached on Mon to Fri, 7:30 am to 4:00 pm.
